Abstract

Aspiration pneumonia is a critical disease and can result from a various causes. Epiphrenic diverticula is a rare disorder, which can cause aspiration of food material contained in it. Mediastinal tuberculosis can also cause traction diverticula at mid-esophagus, which usually are asymptomatic and induce no complication. In this article we describe a case, suffering of all these three disorders and after seven years of surgery and medical treatment any symptom was not found in the patient.
